Automated External Defibrillators can save life when a heart arrest happens

1. Turn ON the AED
2. Apply AED pads
3. Follow the voice instructions and deliver a shock

Features:
- High capacity and long-life lithium manganese dioxide battery, minimum 200 shocks, 5-year life
- Visualized status of battery and system
- Detailed voice instructions and illustrations make rescue easier
- Automated tracking and direct data transfer via built-in 4G module (optional)
- Data storage of 24-hour ECG and up to 1000 events
- Deliver a 200J shock to adults and 50J shock to pediatric
- Daily self-tests, report device status in time, ideal for remote management
